

## **WE UNDERSTAND YOUR CONCERNS ABOUT AMALGAM-MERCURY FILLINGS.**

Within the healthcare community, there are growing concerns about the health hazards of mercury amalgam (silver) materials used in dentistry. At Natural Smiles Dental Care we understand the concerns about the danger of mercury, and how they may affect our patients, our environment and ourselves. For patients wishing to remove their mercury-amalgam fillings, we provide barriers to prevent ingestion and inhalation of vaporized and particle size amalgam. A steady flow of 100% oxygen and a rubber dam oral barrier help to minimize the exposure to mercury vapor. Air exchangers in the operatories remove ambient air-born contaminants. We offer all-ceramic and porcelain crowns which are both esthetically pleasing and metal-free. Tooth colored fillings are also available and often a more economical solution for patients needing to treat multiple areas at once. It is our goal to provide healthy, biocompatible, long-lasting dental restorations, one patient at a time.

If you would like more information or have concerns you would like to discuss please contact our clinic Natural Smiles Dental Care at (651) 483-9800 to schedule your new patient consultation and exam. Dr. Pearson also offers phone consultations.
